a touch to life

G-Zeroflex® has been developed and produced as a combination product in response to the increasing demand for ultra-matte surfaces in the market together with CPL product technology; it is a very functional, innovative and thin flexible laminate with a wide range of applications in the market. It has both technical and aesthetic features of decorative laminate. Thanks to its special surface coating, it imitates the natural touch of wood while providing a smooth and warm touch to the surface. Its ultra-matte feature prevents unwanted light reflections. The technology surface feature repels any moisture residue caused by contact and leaves no fingerprints after use and resists micro- surface scratches. Post-forming Laminate, which is highly resistant to the corrosive effects of industrial and household chemicals, can be produced as both HGS and HGP applications.

CLAREO
TRANSLUCENT DECORATIVE LAMINATE

a touch to life

Translucent Decorative Laminate

Clareo® (Translucent Decorative Laminate) is achieved by digital printing surface with any desired design, color and pattern options. This is a light transparent product due to its special core technology. In addition to their high durability, Clareo® Laminate offers a unique decorative solutions for ceilings, backsplashes, column and countertop coverings and many other applications.

S-Ext

a touch to life

Exterior Decorative Panel

S-Ext EBC ; exterior decorative compact panels produced under high pressure and high temperature with impregnated kraft paper and EBC (electron beam curing) decorative papers. Cause of its smooth and non porous surface S-Ext EBC exterior decorative panels are delaying contaminations and have an easy clean surface property. Fire retardant and doesn't include asbestos – chlorite-toxic substances. There are too many properties that to be choosen beside good flexural , tensile , scratch, wear and crack resistance.

S-Ext® exterior decorative panels are produced by-pressing impregnated kraft papers together with decorative papers which are EBC (Electron Beam Curing) treated. The process of pressing involves high pressure and temperature.

S-Ext UV+®; Exterior compact panels are produced by HPL Technolgy. UV+ compact panels are resistance to UV lights and all type of weather conditions due to its special surface technology. This is a durable and decorative material which gives you a wide variation of design options for your building's exterior.

S-Lab

a touch to life

Chemical Resistant Compact Laminate

S-Lab® is a special compact panel with an extra resistant against to different chemicals thanks to the its special surface technology. S-Lab® is manufactured for the Lab furnitures which has a high resistance to many aggressive chemicals with its surface that is not affected by cleaning materials, strong organic solvents, acids, bases and salts. Thanks to all these features, it is easy-to-maintain and easy-to-clean. It is used mainly as a worktop in chemistry, biology, pharmacy, radiology, physics, cosmetics, botanical laboratories, hospitals ,food industry laboratories and industrial kitchens.

S-Bio

a touch to life

Antibacterial Laminate

S-Bio is a product with an integrated hygienic structure that can be produced as a laminate or compact laminate used against bacteria. S-Bio continuously and effectively neutralizes the ability to grow and multiply of more than 99% of bacteria within 24 hours. The surface feature homogeneity of S-Bio® ensures that the neutralization ability works without any problems. Bacterias which S-Bio is primarily resistant are Pseudomonas Aeruginosa,

Staphylococcus Aerus, Salmonella Choleraeaeisus, and Escherichia coli.

All these features of S-Bio are certified by ISEGA with the test results. It does not infect food and air and does not generate emissions. S-Bio is used in industrial kitchens where food is processed, in hospitals, treatment and care rooms, pharmacies, laboratories, public transport vehicles, banks and in all areas where hygiene is important.

S-Alu

a touch to life

Metal Laminate

S-Alu®; is a decorative laminate and compact laminate manufactured by a metal surface colored as aluminum, copper or stainless steel instead of decorative paper.

Thanks to its protective foil, G-Alu® is resistant to scratches which can occur during the transportation and fabrication. The surface of the material can be easily cleaned with a damp cloth and a light cleaning material that does not contain abrasives.

It is mainly preferred in interior decoration and furniture industry thanks to its modern design line, different texture and special surfaces. It is recommended to be used indoors and on vertical surfaces and not to remove the foil during the application process.

S-Flex

a touch to life

Flexible Laminate

S-Flex® is a flexible laminate used in different applications such as doors, door frames and skirting profiles. Thanks to its special surface properties, it reduces labor costs and time spent and allows to manufacturers saving of paint, coating and labor costs. It is recommended to be used on vertical surfaces, especially where the sharp turns needed. It is used for doors, door and window frames and different profiles.

S-Flex verified as tripled; SynchoroFlex , MicroFlex, AluFlex SynchoroFlex ; With surface deepness and ultra flexible structure cab be apply different applications instead of flat application

MicroFlex ; Has high surface resistance , elasticity and high resistance. One of the major advantage of MicroFlex can able to produce with all decors SHIPRADE range

AluFlex ; High quality and resistance products where shows ultra elasticity with special aluminums

BAŞARILI KESKİN DÖNÜŞLER

S-Fire

a touch to life

Fire & Flame Retardant Laminate

S-Fire® is a extra fire retardant product. It ignites late and the smoke does not contain toxic gas. S-Fire® is a unique product that demonstrates superior resistance to the fire and spread of fire. It is especially preferred in vehicles used for passenger transportation such as ships, trains, buses, and in hotels, schools, hospitals, business centers, elevators, public institutions and organizations, thanks to these distinctive features.

S-Sign

a touch to life

Engraving Laminate

S-Sign® is a compact laminate produced by the process of different color layers in the core. It is easy-to-clean and durable. It is mainly preferred for signboards and plate making.

S-Com®
a touch to life

Easy to Clean Surface

S-Com Anti-Graffiti® is a special highpressure laminate which offers a surface material in an exposed to graffiti applications.

Compact Laminate is produced from different layers of the impregnated paper (phenolic for the core and melamine for the surface) by pressing in the high pressure hydraulic press that exposes the impregnated paper layers to high temperature (up to 150°C) and high pressure values (up to 90 Kg/cm²). S-Com Anti-Graffiti® has mechanical properties such as tensile strength, bending-flexural strength, low thermal expansion and It has a high performance surface with a high abrasion and scratch resistance.

S-Com Anti-Graffiti® can be used in graffiti applications, in areas exposed to materials such as different types of paints, felt pens and cleaners.

S-Lampan

a touch to life

Laminate Faced Chipboard & Medium Density Fiberboard

Lampan is manufactured by our HPL and CPL Laminates laminated on MDF or Particleboard ready to use in furniture, office furniture or kitchen and bathroom cabinet doors. Product has superior properties such as high surface resistance, high resistance to scratches, hygenic, easy to clean, resistance to damp and molds. SHIPRADE Lampan® has two different panel types such as MDF or Chipboard, with the size of 1220x2440,1220*2800mm.Offers you a rich color and texture option.

The panels produced with SHIPRADE Quality by hot lamination process which gives you an extra board quality comparing to standart lamination process. You can select any design of SHIPRADE Laminate collection to be applied on the board.
